Product Features

Please read this manual carefully before installation and use. Please keep it for reference.

Warm Tips

- This product is only suitable for indoor use, and should be kept away from open fire or high-temperature objects. Please install and use it by professional electrical personnel.
- Before installing and using the product, please confirm that the product is not damaged during transportation for timely replacement or return, so as to ensure the legitimate rights and interests of consumers.
- Non professionals are not allowed to disassemble and repair the product. If maintenance is required, please contact our sales person. Our company will not replace or guarantee the product disassembled and repaired without permission.
- Before cleaning the product, please turn off the power and do the cleaning with dry cloth. Please do not clean with chemical or corrosive solvents.

Installation Note:

- Please install the luminaries by professional electrical personnel to avoid accidents or damage to the product.
- Cut off the power supply before wiring, and a power supply in 24VDC complying with class2 must be used. Please refer to our compatible drivers in the product page.
- Please handle with care during installation to ensure the best performance of the product.
- If it is not installed following the relevant requirements and regulations in the manual, the manufacturer shall not be responsible for the loss and damage caused.

Fixing Accessories

x3 Wago Terminal Box

x3 Sets of screws
(Wood, Gypsum, Concrete)

x3 Sets of Anchors
(Gypsum, Concrete)

Tools & Product Preparation

Product Unpack

The Torka Fixture

Mounting Bracket

Fixation Accessories

- Notice: Take out with care to ensure that the product is intact and prevent falling.

Installation Steps

- 1. Turn off the main power

Turn off the circuit breaker before working with a wire that is already connected to an electrical circuit to avoid electrical Shocks.

- You may also turn off power only to the room you'll be working in. If you do turn off power to your entire home, be sure that your electronics and appliances won't be negatively affected.
- You don't need to contact the electrical company to install the junction box, but they can help you shut off the power supply.

- 2. Test that the circuit has no power

Make sure the cable isn't carrying a current to stay safe. Get a voltage tester, then contact the wires with its probes. If the readout doesn't remain at 0, the wire is carrying an electrical current and should not be handled. To totally switch off the power, you must go back to the circuit breaker or fuse box. [2]

- To avoid risks, make sure you understand how to use a voltmeter correctly. The junction box could be seriously hurt or damaged if the metre isn't adjusted properly.
- Don't examine the circuit using a current metre. When no devices are attached to it, it will display a reading of 0 amps, although the circuit will still contain at least 120 volts.

- 3. Fix the mounting bracket on the wall

A. Place the Torka mounting bracket on the you desired position on the wall then proceed to mark the position of the whole with a pencil to insure the proper placement.

B. Drill, and place the screw anchors for a stronger hold of the bracket.

C. Reposition the Torka mounting bracket, (with the power cables coming through the V-slot and screw it in.

! Before fixing the Torka mounting bracket to the wall, make sure to pull the cables through the bottom V slot.

! Make sure to use the correct screws in respect to the surface on which Torka will be mounted on. Each type of screws is identified for each application (wood, concrete, or gypsum)

- 4. Cables connectivity

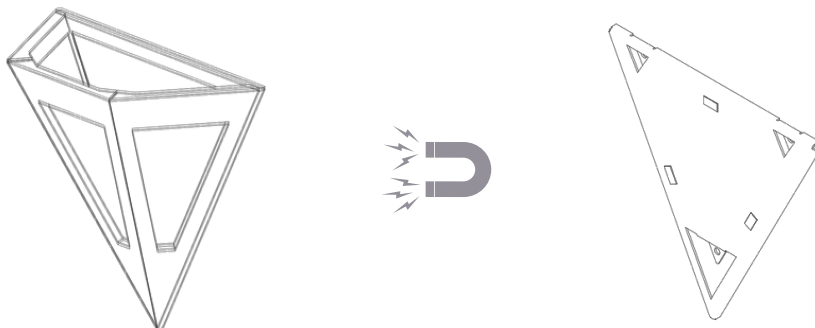

! Make sure to connect the right cables together. The fixture MUST be connected to a 24V driver. DO NOT connect it to the 110V lead wires

- 5. Mounting the fixture

As you may have noticed the Torka mounting bracket has three strong magnets, now that it is mounted and wired, your new Torka fixture can be very easily set on the mounting bracket, the magnets will do the rest!

Make sure to push the excess wire inside the mounting bracket toward junction box, or inside the free space in the bottom of the Torka.

Important Notes

Note:

- To ensure the correct installation, maintenance, and inspection of the product, please entrust electrical and electrician professionals to be responsible.
- Please use it according to the rated voltage marked on the package or product. Do not use it in a too higher or too lower voltage, otherwise, it is easy to cause product failure.
- Before installation, you must first cut off the power supply.
- Do not look directly at the product for a long time when it is illuminating. The powerful light generated by the product may hurt your eyes.
- Do not install the product near the stove, gas, and exhaust funnel to avoid damage.
- Non-professional personnel shall not carry out disassembly and maintenance.

Pay attention to the following points when installing in all methods

- Check whether all connectors are connected well and firmly.
- Check that all power cords are connected correctly.
- All the illustrations in the user instruction are diagrams only.
